

Guided Reading Tasks — B2/C1

How to use this worksheet: the text is divided into short blocks of two to four paragraphs. Read one block, answer its questions, and only then move on. Do not read ahead. Answer in your own words unless a question asks you to quote.

Part 1 — The title and Abstract (paragraphs 1–2)

1. Read the title and paragraph 1 only.

a) What social problem is used to justify this research?

b) Why do the authors consider students on sport-related courses an especially important group to study?

2. Paragraph 1 lists three aims. *Rewrite* each one as a direct research question beginning with a question word. (*Example: an aim such as “to measure how much time students spend training” becomes “How much time do students spend training?”*)

Part 2 — Introduction, first part (paragraphs 3–5)

3. Define each term in your own words, one sentence each.

(a) autonomous motivation _____

(b) controlled motivation _____

(c) relatedness _____

4. **Reference.** Each sentence below contains a word in bold. What does that word refer back to?

(a) 3: “... protecting **them** from what has been termed a ‘socially toxic’ environment.”

(b) 4: “... but only if those who teach **it** understand how motivation works.”

(c) 4: “... where teaching supports **them**, students participate more willingly.” (Careful: it is not the students.)

5. Paragraph 5 describes the five levels of the **TPSR model**.

(a) List the five levels in order, from lowest to highest.

(b) What is the difference in behaviour between the lower levels and the higher levels?

(c) “Sport offers a practical arena in which **this progression** can be observed and developed.”
What does this phrase refer to?

Part 3 — Introduction, second part (paragraphs 6–9)

6. Read paragraphs 6 and 7.

(a) Define resilience in your own words.

(b) Explain the difference between *emotional attention*, *emotional clarity* and *emotional repair*.

(c) Why does it matter that future PE teachers are physically active themselves?

7. Read paragraph 8.

(a) How was the Hungarian education system organised historically?

(b) How did the Spanish system differ?

(c) Write the main idea of paragraph 8 in one sentence.

8. Read paragraph 9.

(a) Which of the five predictions concerns differences between cultures?

(b) Write the main idea of the whole Introduction in one sentence.

Part 4 — Method (paragraphs 10–13)

9. (a) Complete the table. Add the paragraph number to each answer.

Feature of the study	Details from the text (+ paragraph)
Type of research design	
Total number of participants	
Nationalities, and how many from each	
Proportion of male participants in each country	
Where the study took place (institutions)	
Age of participants	
How participants were selected	
Number and types of questionnaire used	
Statistical test used	
Ethical procedures followed	

(b) Define cross-sectional in your own words.

Part 5 — Results, first part (paragraphs 14–15)

10. Complete the paraphrase of paragraph 14 with one word in each gap. Then read paragraph 15 and complete the table.

Students reported high levels of both types of motivation, though (1) _____ motivation was stronger overall. Since the two were closely (2) _____, the authors concluded that most students act from a mixture of personal interest and outside pressure. Autonomous motivation was moderately linked to personal and social responsibility, emotional (3) _____ and (4) _____, but only (5) _____ linked to emotional attention, emotional clarity and the wish to remain physically active. Controlled motivation showed weak links with almost every other (6) _____.

Variable (p.15)	Higher in Hungary	Higher in Spain
Relatedness		
Controlled motivation		
Autonomous motivation		
Emotional attention		
Emotional repair		
Resilience		
Personal responsibility		
Social responsibility		
Intention to remain physically active		

Part 6 — Results, second part (paragraphs 16–18)

11. Read paragraphs 16 to 18.

(a) Paragraph 16 says sex differences were “context-specific rather than uniform”. Explain this phrase in your own words.

(b) Give two contrasting pieces of evidence from paragraph 16.

(c) Paragraph 17 uses the expressions “possible evidence” and “correlation alone cannot confirm”. What do these expressions do?

(d) Complete the table from paragraph 18.

What TPSR contributes	What SEM adds

(e) Why do the authors believe the two models work better combined than separately?

Part 7 — Limitations and Conclusions (paragraphs 19–21)

12. Read to the end of the text.

(a) List the three limitations given in paragraph 19.

(b) For each limitation, what does it prevent the study from claiming?

Part 8 — After reading the whole text

13. Which statement best expresses the main idea of the whole article? Circle one answer.

- a. Autonomous motivation was more strongly associated with responsibility and resilience than controlled motivation was.
- b. Because motivation driven by genuine interest is linked to greater responsibility and resilience, future PE teachers should be trained through a combined TPSR–SEM model.
- c. Spanish and Hungarian students differ in motivation and responsibility because of their countries' contrasting educational histories.
- d. Cross-sectional research cannot show that motivation causes responsibility, so longitudinal studies are needed.
